**Peltier Cooler Circuit** - How to Build a Simple Fridge using Peltier Device. The simple construction of a simple peltier refrigerator circuit shown in the figure demonstrates the above discussed set up where two such devices are appropriately fixed with aluminum plates for radiating different degrees of temperatures from their relevant sides. The plates responsible...Because there are two dissimilar conductors into the circuit one junction of the unit will be cooled and the other will be heated. This effect is even stronger with two dissimilar semiconductors. Peltier effect is commonly used as coolers, mainly for cooling electronic components and small instruments.
